

## REMARKS

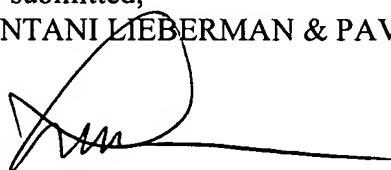

### Claim Status

This Supplemental Amendment supplements applicants' Amendment filed on July 3, 2008, and is submitted to conform certain wording in independent claim 1 to correspond to the wording that appears in the specification. Specifically, the wording "radiation from the monolithically integrated pump radiation source is emitted mainly laterally" in claim 1 has been amended to "a main direction of pump radiation from the monolithically integrated pump radiation source is lateral", which is the wording that appears at pg. 5, lines 24-25 of the specification as originally filed. The arguments presented in the July 3, 2008 response remain unchanged, except that where the July 3 remarks recite the wording "the direction of radiation from the pump radiation source is primarily lateral", the reference should now be to the newly-amended wording the "main direction of pump radiation from the monolithically integrated pump radiation source is lateral". No new matter has been added. Entry of this Supplemental Amendment is therefore deemed to be appropriate.

It is believed that no fees or charges are required at this time in connection with the present application. However, if any fees or charges are required at this time, they may be charged to our Patent and Trademark Office Deposit Account No. 03-2412.

Respectfully submitted,  
COHEN PONTANI LIEBERMAN & PAVANE LLP
